 - a. Joey Tursi - jotu7294 - jotu7294@colorado.edu
 - b. Kaleb Perry - notParry - kape6528@colorado.edu
 - c. Bryce Ogburn - Brog6754 - brog6754@colorado.edu
 - d. Gil Eskayo - geskayo - gil.adams@colorado.edu
4. Application Name: Skinee Dipping
5. Application Description: The CSGO (Counter-Strike: Global Offensive) Price Tracker for Skins API is a powerful tool designed to provide real-time and accurate pricing information for in-game weapon skins within the popular first-person shooter, CSGO. This API offers developers and gamers alike a seamless way to access and monitor the constantly fluctuating market values of CSGO skins, allowing them to stay up-to-date on the economic dynamics of the game.
With the CSGO Price Tracker for Skins API, users can effortlessly retrieve pricing data for individual skins or collections, helping them make informed decisions when buying or selling items on the Steam Community Market or other trading platforms. The API offers detailed insights into factors influencing skin prices, such as skin rarity, condition, and popularity, ensuring users have a comprehensive view of the market. Whether you're an avid CSGO player looking to make profitable trades or a developer seeking to integrate skin price tracking into your application or website, this API is an invaluable resource for staying in the know about the ever-evolving world of CSGO skin trading.
6. Vision Statement:

To be the premier source of real-time market data for CSGO skin enthusiasts worldwide, empowering gamers and traders with the most comprehensive and up-to-date pricing information, so they can trade with confidence and maximize their in-game inventory value.

For: CSGO enthusiast for skins
Who: For the gambling addicts
The: Skinee dipping
Is a: Price-tracker / gambling site
That: The benefit is that it will provide up to date information on the current market for skins and will also provide alerts of pinned skins that have recent price changes and will have a link to the skin if the user wants to make a purchase.

8. Development Methodology
Stacking

9. Communication Method: Our team plans to communicate and coordinate our work through Discord, utilizing various channels dedicated to different aspects of the project for organized discussions. This platform will also enable us to schedule meetings, share files, and maintain a clear record of our communications, ensuring transparency and easy access to information for all team members.

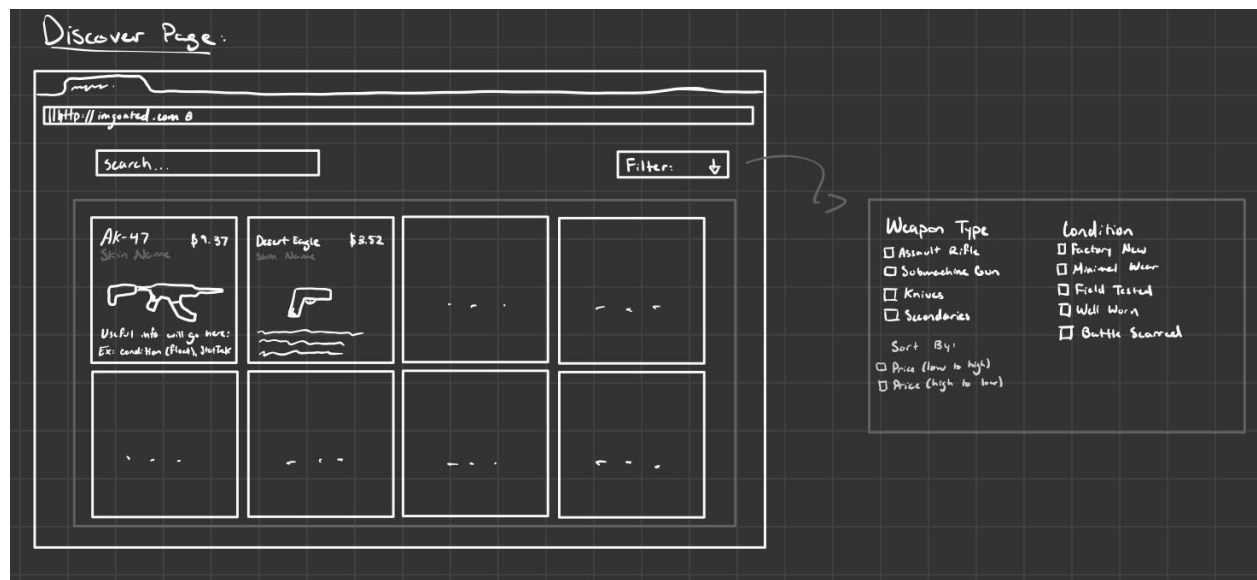

9. Meeting Plans

Plan on meeting every thursday at 4:30 with the TA to give updates on our progress

10. Use Case Diagram

TA Notes:

- Amazon price checker, for every product on Amazon we can set conditions for prices changing to alert when prices get low (Keepa(?) API)
- Get hold of weather data and have a website that schedules trips based on what the weather is. Scheduling AND weather.
